Accessing Zebra Printer Settings Via Web Browser

How to access the settings of a Zebra printer via a web browser

Difficulty Easy   **Duration** 5 minute(s)

Contents

Introduction

All Zebra printers used by Stuga have a web page interface. This is used to access all the printer settings

Items

🛒 [[Item:|]] A fatal error occurred in the #info parser function

Step 1 - Get IP address from configuration label

The IP address of the printer is needed to access the web page. This is done by creating a configuration label from the printer. The label is created in different was depending on the printer

1. GK420d and earlier printers - Press and hold the button for two flashes, then let go
2. ZD620- Press and hold the leftmost 2 buttons simultaneously until the label printing starts

Step 2 - Type the IP Address into a browser

⚠ If the IP address is not on the same subnet as the PC with the browser, you will not see the printer
