Autocut Wrong Bar Cut

What to do if the wrong bar has been cut by mistake

| Difficulty **Very easy** | Duration **2 minute(s)** |

Contents

Step 1 - If the bar was cutting was stopped before the end of the bar

Step 2 - If the bar has been fully cut

Step 3 -

Comments

Step 1 - If the bar was cutting was stopped before the end of the bar

If you realised the profile was wrong and managed to emergency stop the machine before the bar was marked finished (still marked as not cut [N]); you can simply remove the bar of wrong profile. Replace with the correct profile and re-cut - be aware that you may have some duplicate labels.

Step 2 - If the bar has been fully cut

If the last bar of wrong profile was fully cut (marked as cut [Y]). Simply, highlight this bar and press 'Re-cut Bar' so it is marked as not cut [N]. Now load the correct profile and carry on.

Step 3 -
