Compressed Air

Blow-down guns

The machine has a number of blow down guns added to help the operator with cleaning the machine. HSE guideline necessitate the reduction of pressure on these guns to prevent injury to operators,. Stuga fit a 0-2 bar regulator to meet UKCA / CE / PUWER Regulations
See <https://www.hse.gov.uk/engineering/faqs.htm> for more information

- Reduce the exit pressure of the compressed air to as low a level as practicable (as a guide 30psi/2.1 bar is effective at cleaning). Gauges are commercially available for testing this exit pressure.
