

Runing MRP

How To Run MRP

Difficulty Easy

Duration 30 minute(s)

Contents

Step 1 - Reading Demand

Step 2 - Linking process

Step 3 - Run MRP

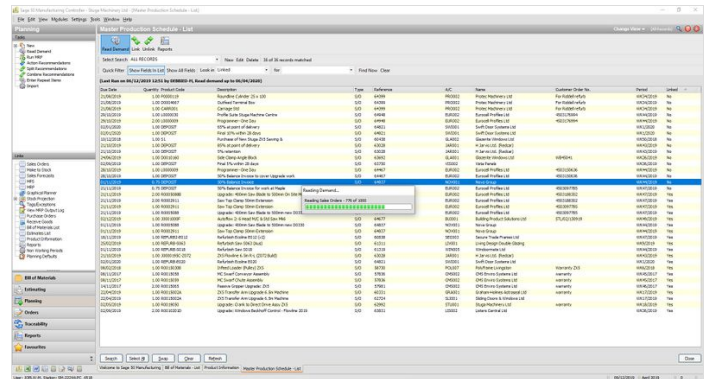

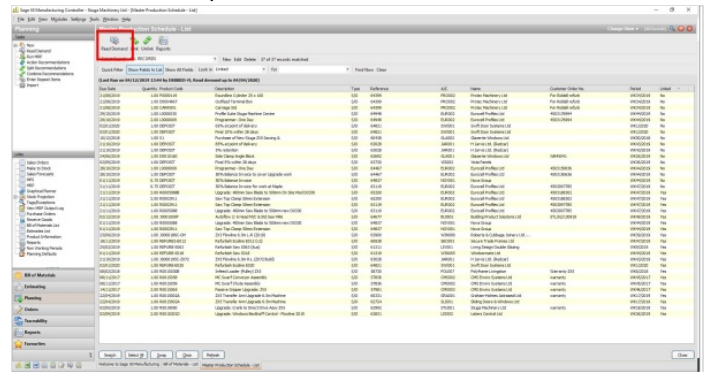

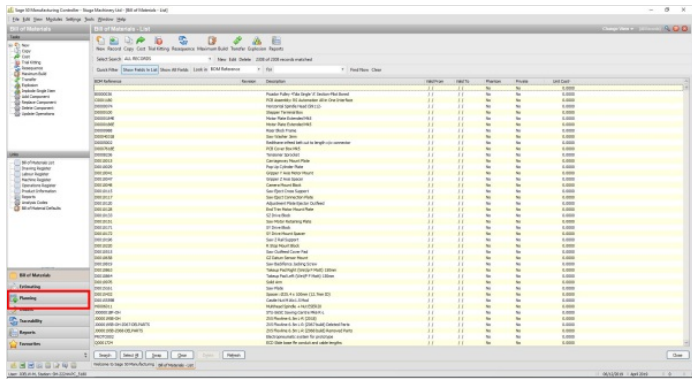

Step 4 - Run MRP

Comments

Step 1 - Reading Demand

Press the Planning Tab > Read demand > ok

The demand will then read with a load screen. Once this has finished move on to the next step

Step 2 - Linking process

We are looking to make sure any assemblies or builds are linked at this stage.

There is a column that can be activated to easily show this.

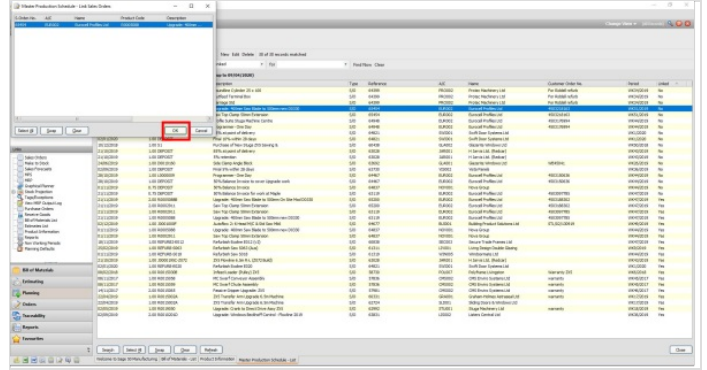

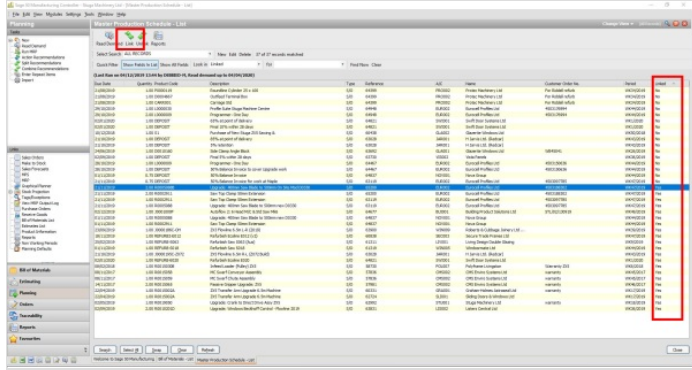

Assemblies ('R' codes) with a sales order reference must be linked.

Also when running a new build through ('J' code) this must be linked.

To Link, click to highlight the line required then press link button. (Hold Ctrl and click to select multiple lines)

When the next screen opens, double check the correct codes have been selected and press ok.

These part codes will now be fully linked and ready to run through MRP

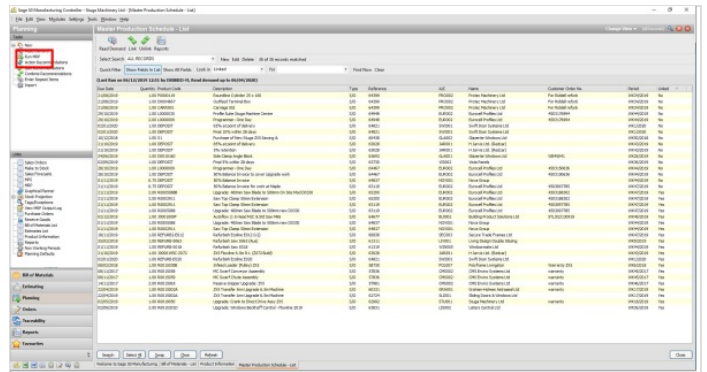

Step 3 - Run MRP

Click on 'Run MRP'

This can take anything between 20-45 mins depending on the amount of parts that will be required.

Once finished we click on 'MRP from the 'links' tab on the side menu.

Next 'Change view' to 'Recommendations'

Step 4 - Run MRP

Click on 'Run MRP'

This can take anything between 20-45 mins depending on the amount of parts that will be required.

Once finished we click on 'MRP from the 'links' tab on the side menu.

Next 'Change view' to 'Recommendations'
