## Overview

When winSaw is activated from the desktop, there are a lot of initialisation files to load and a lot of potential areas for the software to fail. Reasons could be corrupt files, errors in data, operating system failures, etc

To help identify where these problems are, the software outputs a number to a file called "sclick.txt" which logs what it is attempting to do

 AxInterop.MintControls_5850Lib.dll	05/11/2019 07:59	Application extension
 bcParser.NET.dll	05/04/2019 18:15	Application extension
 Interop.MintControls_5850Lib.dll	05/11/2019 07:59	Application extension
 masterdir.saw	16/10/2019 18:42	SAW File
 sclick.txt	05/11/2019 07:54	Text Document
 stdole.dll	11/10/2019 15:23	Application extension
 System.Data.dll	18/03/2010 18:31	Application extension
 System.Data.SQLite.dll	11/10/2019 15:23	Application extension
 winStugaSawVB.exe	05/11/2019 07:59	Application
 winStugaSawVB.exe.config	19/02/2019 09:39	XML Configuration File
 winStugaSawVB.pdb	05/11/2019 07:59	Program Debug Data...
 winStugaSawVB.xml	05/11/2019 07:59	XML Document

sclick.txt - Notepad

Knowledge of these codes will allow you to trace what a startup / initialisation problem could be, as the final code in the list will be the issue that caused the initialisation to fail

## Codes

Code	Description	Notes
1	Check if App already running	
2	Open main screen and locate	
3	Set interval timer	
4	Set front end version	
5	initialise main program	
51	Load Master Dir text	
52	Create internal variables	
53	Load Profiles	
54	Load colours	
5401	Load AH Adjustments	
541	Create machine database	
333	Load Offcuts	
55	Load Gaps	
56	Load messages	
57	Load IO Definition	
575	Load laser correction file	
58	Set directory structure	
59	Housekeep old "finished" autoqueue batches	

591	Housekeep old archive files	
592	Start Autoqueue	
6	Add Initialise Button	
11	Initialise pressed	
12	initialise machine
